### Functional Diagram

### Description

The 0737-0101-99 mid-range electrolytic tilt sensor provides extremely high accuracy position measurements in one axis over a ±10° angle range. This sensor can also be encapsulated (PN 0719-3705-99) to simplify integration into a larger system.

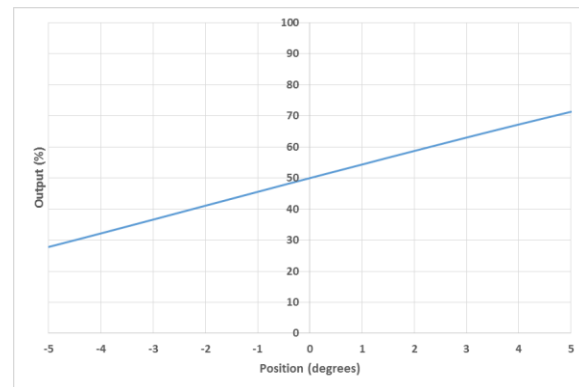

This is a passive sensor that requires signal conditioning electronics to provide an output. For a list of compatible signal conditioners, see the Related Products section on page 2.

### Applications

- Geotechnical and geophysical monitoring
- Structural monitoring
- Tilt meters, tilt beams, and horizontal inclinometers
- Railway track monitoring
- Machine tool leveling
- Zero reference

## Mid-Range Glass Electrolytic Tilt Sensor

Part Number: 0737-0101-99 and 0719-3705-99

When using an excitation circuit not designed by The Fredericks Company, ensure that no direct current passes through the sensor. Direct current will lead to sensor damage, output drift, and general instability. For a description of hardware and software design for this sensor, see application note AN1000.

The 0737-0101-99 and 0719-3705-99 must be mounted horizontally (parallel to the surface of the earth and perpendicular to the force of gravity). For best performance, isolate the sensor from vibrations when mounting it.

Further information on electrolytic tilt sensor basics is provided on our website at [www.frederickscompany.com](http://www.frederickscompany.com).

### Test Circuit

All data was acquired with a Fredericks Company Dual Axis 6200 Series Signal Conditioner in single axis mode at 20° C. A general schematic of our signal conditioners is provided below. Further information on sensor excitation and excitation circuitry is provided on The Fredericks Company website and in the application note AN1000.
