- Figures in the table are average measured values. Please request the product delivery specification when preparing a purchase specification.
- The characteristics are the values at rated voltage (12 V or 24 V), and normal temperature and humidity.

General specification

| Materials Used | Venturi: ABS and PBT synthetic resins Propeller: ABS and PBT synthetic resins Bearing: Both side shielded ball bearing |
|--------------------|--|
| Motor | Brushless DC motor, Protection type: Current shut off by detecting lock state, automatically reset |
| Common Elec. Spec. | See pages G-11, G-12, G-13. |
| Standard Carton | 60 to a carton of (450 x 380 x 220) mm, mass 9 kg |

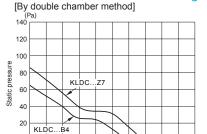

Venturi shape

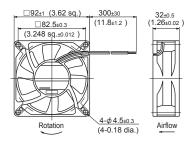

Specify no suffix symbol in your ordering information when the venturi is mounted with screws. Suffix 'F' for an open flange venturi.

- NIDEC SERVO can meet many of your requirements for customization, such as special connectors, other sensors not listed above, variable speed specifications, and other modifications. Please contact NIDEC SERVO during your product planning and development stage.
 The listed products are registered in the following overseas standards files, UL: E48889, CSA: LR49399, TUV: R9451586
- 3D data is also available at our website.

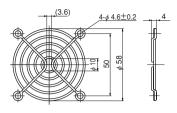

F60P Guard (Mass 4 g)

Material: Polycarbonate (black)

UL94V-2

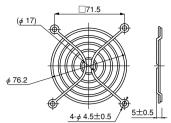

F60UL Guard (Mass 12 g)

Material: Mild steel wire 1.6 dia.

Surface treatment: Nickel chromium plating

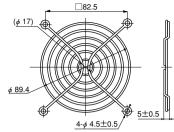

F80UL Guard (Mass 14 g)

Material: Mild steel wire 1.6 dia.

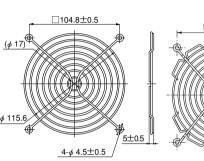

Surface treatment: Nickel chromium plating

F92UL Guard (Mass 16 g)

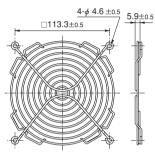

Material: Mild steel wire 1.6 dia. Surface treatment: Nickel chromium plating

F120UL Guard (Mass 29 g)

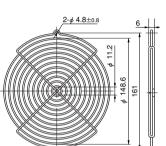

Material: Mild steel wire 1.6 dia. Surface treatment: Nickel chromium plating

F127UL Guard

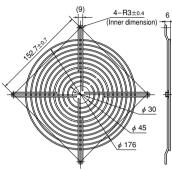

Material: Mild steel wire 1.6 dia. Surface treatment: Nickel chromium plating

GUARD 172

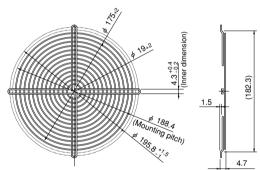

Material: Mild steel wire 2 dia. Surface treatment: Nickel chromium plating

F180UL Guard

Material: Mild steel wire 1.6 dia. Surface treatment: Nickel chromium plating

F200UL Guard (Mass 82 g)

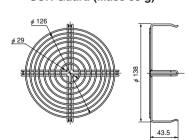

Material: Mild steel wire 1.6 dia. Surface treatment: Nickel chromium plating

All guards conform to the UL standard when combined with NIDEC SERVO fans. The installation of a filter, guard and other accessories will constitute a ventilating load, reducing the airflow. Select a suitable guard, taking into consideration the increase in air resistance. (See Figs. 12 and 13 on page G-7.)

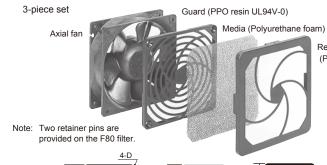

SCN Guard (Mass 55 g)

Material: Mild steel wire 1.6 dia. Surface treatment: Nickel chromium plating

Guard special for intake side of SCN (metal venturi) fans.

DC axial fans & blowers with sensors

The DC fans and blowers of NIDEC SERVO have a function to send an alarm signal when the fan motor revolutions slow down. Several systems are used to cut off the system power supply by this alarm signal, with three types of sensors available. Select the right type of sensor in accordance with the purpose of use. The lead wire for the sensor is yellow. The output type is an open collector output for all three types.

Sensor type

1. Lock detection type (Product code: S)

The output signal indicates an [L] state (transistor is ON) while the propeller is rotating, changing to an [H] state (transistor is OFF) less than five seconds after the propeller stops rotating. The propeller automatically restarts operation within five seconds when the lock is unlocked. ([H] \rightarrow [L] 5 s). If the pull-up voltage is live, the [H] state (transistor is OFF) will engage in less than five seconds, even when the power is turned off.

Specification: VcE = 28 V max

(55.2 V max for 48 V products)

IC = 5 mA max

(VcE (SAT) = 0.4 V max)

When the blades are turning

Is or less
VH

Tr

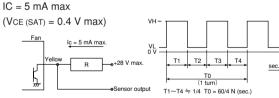

Sensor quitty

Sec.

*When the power is turned on, the state sometimes becomes high [H] for several hundred ms.

2. Pulse output type (Product code: P)

A rectangular wave of two pulses will be output for each turn of the propeller while the propeller is rotating, outputting two types of signal depending on the propeller position when the propeller is locked. (See the note below \divideontimes)

**Output signal waveform when the fan is stopped: The following two types of waveform are output, depending on the blade position when the propeller is stopped:

Pulse outputs of High - constant or restart timing (0.05 Hz to 2 Hz).

3. Speed detection type (Product code: Q)

The output signal indicates the [H] state when the propeller revolutions are slower than the preset speed, changing to the [L] state when the propeller revolutions exceed the reset speed.

[Products with a reversed output waveform are also available, suitable for a wired OR connection when several fans are installed. Contact NIDEC SERVO for further information. {Former code: SQ, new code (15 - digit code products): R}]

● Specification: VcE = 28 V max
(55.2 V max for 48 V products)
IC = 5 mA max
(VcE (SAT) = 0.4 V max at 5 mA)

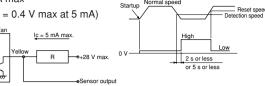

Fan

Ig = 5 mA max.

Output waveform

Startup

Normal speed
High

Note: The output waveform for type SQ (R) will be reversed. The speed setting for the alarm output is about half the rated speed. For more detailed information, please request a product delivery specification from NIDEC SERVO.
