

## The Eliminator<sup>™</sup> Rotogauge Replacement for LP Gas & NH<sub>3</sub> Service

# Applications

The Eliminator<sup>™</sup> direct-reading float gauge is a direct replacement for 1" NPT rotary-type gauges in LP and NH3 storage tanks. These gauges are designed for larger tanks up to 84" [2134mm] in diameter. The Eliminator<sup>™</sup> is not intended for use in filling tanks - its use is re strict ed to tanks with fixed liquid level gauges, used to determine when the maximum fill level has been reached. The eliminator can be used in mobile applications up to 72" [1828mm] in diameter.

## How to do the Conversion

- 1. After the storage tank has been evacuated, remove the rotary gauge from the 1" NPT opening at the centerline of the head. Clean and retap the female threads.
- 2. Remove the two screws from the bezel. Put the bezel, screws and dial chamber aside for the moment. Remove the four mounting screws holding the gauge head to the adapter.
- 3. Insert the lower portion of the replacement gauge, including the float bulb, float arm, gear housing and counterbalance, into the tank opening.
- 4. Apply three wraps of 1/2" [12mm] wide Teflon tape, or other suitable thread seal ant, to the 1" NPT threads on the steel adapter through which the gauge support passes.
- 5. Screw the adapter into the tank opening to achieve a leak-tight joint, and align the gauge mounting holes in the horizontal plane.
- Using the gasket and four mounting screws supplied, attach the gauge to the adapter fingertight. Be sure the gauge is right side up, the bracket tab for lo cat ing dial cham ber should be on the right. Torque the mounting screws evenly to 140/150 lb.in., [16,4Nm] using a cross pattern.
- 7. Reattach the 4" dial chamber and bezel to the Senior™ gauge head brackets using the two screws supplied.
- 8. If you end up with the dial chamber up side down, you cannot solve the problem by rotating the bracket. You must rotate the entire gauge 180°.

Part #	Fits Tank Size I.D.
Stationary P6293-R4400 Mobile	Up Thru 44" [1210]
Stationary P6293-R600 Mobile	44.1" Thru 60" [1210] – [1524]
Stationary	60" Thru 72"
P6293-R7200	[1524] – [1829]
Mobile	60" Thru 72"
P6293-R7200	[1524] – [1829]
Stationary	72.1" Thru 84"
P6293-R8400	[1829] – [2.134]

Any Eliminator installed in a tank greater than 44" is excluded from the Rochester Sensors Limited Warranty.

#### Read Completely Warnings & Cautions before attempting gauge removal or installation\*

These instructions are prepared to assist trademen and others qualified to service liquid storage tank equipment. Consumers are not qualified to perform the installation described below. If you have any questions concerning installation or operation of the gauge or gasket, contact rochester sensors or one of our authorized distributors for assitqance. Check side of gauge head for model number and ask for gauge installation instructions for your model.

Since the suitability of these products depends upon a wide range of factors not in our control, Rochester Sensors expects and understands that you will conduct the testing and evaluation necessary to determine that these products are suitable for your application. Whilst every effort is made to ensure the above details are correct at the time of printing, Rochester Sensors reserves the right to make material changes, and or technical changes without notification.

### Warning:

Determine and install the appropriate replacement gauge baased on system requirements. The gasket type supplied may not be suitable fo all applications and for those applications other gasket materials may be available. The information contained herein is intended for guideline use only and the suitability of any part for a particular application must be determined by the user prior to installation. Improper gauge or gasket selection or application may result in seal failure and subsequent release of tank contents.

# Warning:

Even if gauge registers empty, tank may contain high pressure and flammable gas. Do not remove gauge or other pressure containing fittings unless precautions against release of tank contents have been taken. A hazard of fire or explosion may exist if proper methods are not used when removing or installing the gauge or gasket. Replace gasket if gauge is removed. Do not reuse gasket. When reinstalling gauge head align head for proper orientation of the float inside tank. Torque head or mounting screws evenly in several steps based on mounitng screw size, gasket material & gauge head size & style.

### **Caution:** Improper gauge selection or application may result in inaccurate gauge reading. Release of

tankcontents as well as damage and safety hazard may result if tank is overfilled. Fuel exhaustion may occur if tank contents are less than indicated. This gauge is not substitute for a fixed level guage or weight mesurement device that may be required for filling.

Warning: Improper application, installation, or use of this gauge may cause serious injury or property damage.

#### Materials of Construction\*

Head, Gears, Gear Housing, Cross Stud, Bearings & Float Stainless Steel. Centershaft, Support Tube & Float Rod Stainless Steel. Drive Magnet Alnico. Gasket Spiral wound, Teflon filled, stainless steel. Adapter Cold-rolled steel. Counterweight Stainless Steel

#### **Note:** For threaded gauge installation instructions see MS-516.

#### When ordering, specify:

- 1. Model number.
- 2. Tank ID.

**Warning:** Carefully ensure that gauge and adaptor are adequately protected from damage that might cause leakage of tank contents.

**Note:** Materials and specifications are subjected to change without notice. Pressure ratings subject to change due to temperature and other environmental considerations.

iote. For threaded gauge installation instructions see
